

ALTHAF SHAIK

Sr. DevOps Engineer

CLOUD & NETWORK AUTOMATION

+971 545646260

shaikalthafcg@gmail.com

Dubai - UAE

Shaik Althaf

AREAS OF EXPERTISE

DevOps Engineering
AWS Cloud Computing
Docker Products
CD/CI Set-up & Process
Application Lifecycle Management
Agile Methodologies
Solution Installation & Configuration
Production System Architecture
Azure DevOps
Project Planning
Performance Management
Stakeholder Management

TECHNICAL SKILLS

Cloud Platforms
Azure, AWS

Infrastructure as Code
Terraform

CI/CD & Automation
Azure DevOps, Jenkins, GitHub

Containers & Orchestration
Docker, Kubernetes (AKS)

Networking & Security
Azure Networking, Palo Alto Firewall, DMZ Architecture, DNS

Scripting
Shell, YAML, Groovy

CERTIFICATIONS

IBM Cloud Essentials
IBM (Containers & Kubernetes)
Microsoft Certified Azure
IBM Cloud DevSecOps

PROFILE SUMMARY

- **Senior DevOps Engineer** with 7+ years of experience designing and automating enterprise cloud infrastructure across **Azure** and **AWS** environments
- Expert in tools like **Git**, **GitHub**, **Maven**, **Jenkins**, **Docker**, **Kubernetes**, **Ansible**, **Terraform**, **Shell Scripting**, **Azure**, and **AWS**
- Strong experience in **Azure Networking**, **Palo Alto Firewalls**, **Load Balancers**, **DNS**, **VNet**, **vWAN**, **Secure Virtual Hub**, **Azure App Services**, and **Application Gateway**
- Good experience in managing **AWS** services including **EC2**, **VPC**, **IAM**, **S3**, **Auto Scaling**, and **Load Balancers**
- Expert in **Terraform Infrastructure-as-Code** and **Azure DevOps CI/CD** automation, building reusable pipelines for scalable infrastructure deployment
- Designed and implemented end-to-end **CI/CD pipelines** using **Git**, **GitHub**, **Jenkins**, and **Nexus**, automating artifact creation and container deployment
- Led **cloud migration** and subscription-to-subscription infrastructure transitions across regions for enterprise production environments
- Solid background in automation scripting using **Shell** and **YAML**, and configuration management with **Ansible**
- Integrated **DevSecOps** principles by embedding automated security controls, vulnerability scanning, and compliance validation into the CI/CD lifecycle
- Collaborate with cross-functional **development**, **security**, **networking**, and **cloud engineering** teams to automate and optimize the complete software delivery lifecycle across enterprise **Azure** environments
- Manage **Git**-based source code repositories, automate application builds using **Maven**, orchestrate **CI/CD pipelines** through **Azure DevOps** and **Jenkins**, and maintain standardized release processes
- Containerize enterprise applications using **Docker** and deploy production workloads onto **Kubernetes**, ensuring scalable, highly available, and secure deployments
- Continuously monitor infrastructure and applications using **Prometheus** and **Grafana** and supporting incident resolution

EDUCATION

BSc (Computers) from Sri Venkateswara University Tirupati, India in 2018

WORK EXPERIENCE

Senior DevOps Engineer – Enterprise Cloud Automation

March 2019 – Present

Uniper (Client Assignment via Dhakium)

Dubai / Remote

- Collaborate with software developers, cloud architects, network engineers, and security teams to design, automate, and maintain enterprise **Azure** infrastructure supporting production workloads
- Work closely with networking teams to configure **Azure Virtual Networks, Private Endpoints, Load Balancers, DNS, Route Tables, NSGs, and Palo Alto firewalls** for secure enterprise connectivity
- Enabled logging on **S3 bucket access, VPC flow logs, IAM, AWS Inspector, Lambda, RDS, DynamoDB, and EC2 application servers** along with the configuration of **Elastic Load Balancers** with **EC2 Auto Scaling Groups**
- Perform code reviews, troubleshoot deployment failures, resolve infrastructure incidents, and optimize **CI/CD pipelines** to improve deployment stability and operational efficiency
- Manage production **Kubernetes** environments, monitor cluster health, troubleshoot containerized workloads, and coordinate production releases with multiple application teams
- Participate in change management, release planning, production deployments, root cause analysis (**RCA**), and continuous platform improvements following **Agile** methodologies
- Engineered modular **Terraform** blueprints to provision complex Azure resources, reducing environment setup time by approx. **40%** through reusable code blocks
- Orchestrated multi-stage **CI/CD pipelines** integrating **GitHub** and **Jenkins** to automate code quality gates, security scanning, and artifact versioning in **Nexus**
- Hardened enterprise security posture by implementing **DMZ network architecture** and **Palo Alto firewall** rules, securing **100%** of inbound/outbound traffic
- Deployed global enterprise connectivity using **Silver Peak SD-WAN** and **Azure Virtual Hub**, ensuring low-latency access for distributed teams
- Constructed comprehensive **monitoring** dashboards in **Prometheus** and **Grafana**, setting up proactive alerts that pre-emptively detected **90%** of system anomalies
- Mentored **junior DevOps engineers**, conducting code reviews and knowledge-sharing sessions to standardize best practices across the team

MAJOR PROJECTS

Project 1 — Infrastructure Automation

- **Challenge:** Manual provisioning of AWS and cloud infrastructure was inconsistent and difficult to scale.
- **Solution:** Built Terraform deployment frameworks with automated CI/CD pipelines for EC2, VPC, IAM, S3, and auto-scaling.
- **Result:** Standardized cloud infrastructure deployments, enforced security controls, and reduced manual provisioning effort.
- **Technologies:** AWS, Terraform, Jenkins, GitHub Actions, YAML automation.

Project 2 — Azure Network Modernization

- **Challenge:** Legacy routing architecture constrained scalability and security governance.
- **Solution:** Redesigned Virtual Hub routing and DMZ firewall layers for enterprise traffic paths.
- **Result:** Improved network performance, reduced latency for production services, and strengthened security posture.
- **Technologies:** Azure Networking, Palo Alto Firewall, Terraform.

MAJOR PROJECTS (CONT.)

Project 3 — Azure Enterprise Migration

- **Challenge:** Subscription-to-subscription migration required high reliability and continuity.
- **Solution:** Planned and automated migration workflows with reproducible infrastructure rebuilds.
- **Result:** Delivered modernization milestones with minimal downtime while preserving operational continuity.
- **Technologies:** Azure, Terraform, CI/CD orchestration.

Project 4 — Enterprise Azure Resiliency & Disaster Recovery

- **Challenge:** Platform required stronger failover and disaster recovery readiness.
- **Solution:** Designed regional recovery architecture and automated failover procedures.
- **Result:** Increased resiliency, improved service availability, and reduced recovery risk for critical workloads.
- **Technologies:** Azure DR, networking automation, security controls.

Project 5 — CloudOPS

- **Challenge:** Manual build and deployment processes caused release inconsistencies and operational delays.
- **Solution:** Designed and implemented an enterprise CI/CD platform using Git, Maven, Jenkins, Docker, and Terraform to automate builds, containerization, and deployments.
- **Result:** Established a standardized DevOps delivery pipeline that accelerated software releases and improved deployment reliability.
- **Technologies:** Git, GitHub, Maven, Jenkins, Docker, Terraform, Azure DevOps.

Project 6 — Azure Multi Region & Secure vHUB

- **Challenge:** Required centralized routing, traffic inspection, and scalable network security across Azure environments.
- **Solution:** Designed and implemented Azure Virtual Hub integrated with Palo Alto Cloud NGFW using Terraform for automated routing and security enforcement.
- **Result:** Delivered a secure, centralized enterprise network platform with automated traffic management and enhanced protection.
- **Technologies:** Azure Virtual WAN, Azure Virtual Hub, Palo Alto Cloud NGFW, Azure Networking, Terraform.

ENGINEERING INNOVATIONS

Self-Service Infrastructure Platform

- Eliminated manual cloud provisioning by building an enterprise service catalog that enables users to request pre-approved Azure, AWS, and Google Cloud infrastructure through automated approval workflows and Terraform deployments.
- **Demonstration:** <https://app.dhakium.com/>

Enterprise Cloud Migration Platform

- Designed an Azure migration platform that automates Resource Group and Subscription migrations through a standardized workflow, simplifying enterprise cloud modernization initiatives.
- **Demonstration:** <https://console.macrocloud.in/>

AI Jenkins Plugin (AutoFix Agent)

- Engineered a custom Jenkins extension that uses an autonomous AI agent to analyze pipeline failures, identify root causes, and recommend automated remediation actions, reducing repetitive CI/CD troubleshooting.
